EXAMINER

KING, BRADLEY T

ART UNIT	PAPER NUMBER
----------	--------------

3683

DATE MAILED: 02/13/2006

Please find below and/or attached an Office communication concerning this application or proceeding.

<b>Office Action Summary</b>	<b>Application No.</b>	<b>Applicant(s)</b>	
	10/821,769	SANCAKTAR ET AL.	
	<b>Examiner</b>	<b>Art Unit</b>	
	Bradley T. King	3683	

**-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --**

**Period for Reply**

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

**Status**

- 1) ☒ Responsive to communication(s) filed on 23 November 2005.
- 2a) ☐ This action is **FINAL**.                      2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

**Disposition of Claims**

- 4) ☒ Claim(s) 1,2,4,5 and 7-20 is/are pending in the application.
- 4a) Of the above claim(s) \_\_\_\_\_ is/are withdrawn from consideration.
- 5) ☐ Claim(s) \_\_\_\_\_ is/are allowed.
- 6) ☒ Claim(s) 1,2,4,5 and 7-20 is/are rejected.
- 7) ☐ Claim(s) \_\_\_\_\_ is/are objected to.
- 8) ☐ Claim(s) \_\_\_\_\_ are subject to restriction and/or election requirement.

**Application Papers**

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on \_\_\_\_\_ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.  
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).  
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

**Priority under 35 U.S.C. § 119**

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All    b) ☐ Some \* c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
  2. ☐ Certified copies of the priority documents have been received in Application No. \_\_\_\_\_.
  3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

\* See the attached detailed Office action for a list of the certified copies not received.

## **DETAILED ACTION**

### ***Continued Examination Under 37 CFR 1.114***

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 11/23/2005 has been entered.

### ***Claim Rejections - 35 USC § 112***

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 1-2, 4-5, and 7-20 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention. Claims 1 and 12 have been amended to recite "the resin outer layer has a constant thickness". This limitation is not supported by the original disclosure and appears to contradict portions of the

specification. Note [0030-0031]. Claim 7 recites “the core has a rectangular-cross sectional shape”. The original disclosure fails to support this feature, instead showing only cores of generally circular cross-section. It appears that both of the above noted limitations should be directed towards the spring wire, not the core. To advance prosecution, the limitations have been interpreted as describing the spring wire.

***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-2, 4-5, and 9-20 are rejected under 35 U.S.C. 102(b) as being anticipated by US# 6454251.

US 6454251 discloses all the limitations of the instant claims including; a spring wire comprising a core that includes a plurality of fiber tows 10 (figure 2c); and an outer layer of resin that is substantially devoid of said fiber tows, wherein the spring wire has a constant thickness and cross-sectional shape, and is generally uniform and free of any surface irregularities. US 6454251 further discloses using copper pipe as cladding which would provide an extremely smooth outer surface and constant cross-section.

Regarding claims 9-11, 6454251 discloses glass fibers and epoxy resins.

Regarding claims 12-20, note that product-by-process claims are not limited to the manipulations of the recited steps, only the structure implied by the steps. See MPEP 2113. It is maintained that the structure implied by the process steps is substantially identical to that disclosed by the reference.

Claims 1-2, 4-5, and 8-20 are rejected under 35 U.S.C. 102(b) as being anticipated by US# 2852424.

US 2852424 discloses all the limitations of the instant claims including; a spring wire comprising a core that includes a plurality of fiber tows 14 (note column 3, lines 70-75); and an outer layer of resin that is substantially devoid of said fiber tows(since the fiber tows are saturated with resin, an outer layer of some degree of thickness inherently exists between the tows and the outer tube 12), wherein the spring wire has a constant thickness and cross-sectional shape, and is generally uniform and free from any surface irregularities. Note the cladding which would inherently provide an extremely smooth outer surface and constant cross-section.

Regarding claims 8-11, 2852424 discloses glass, rayon and epoxy resins.

Regarding claims 12-20, note that product-by-process claims are not limited to the manipulations of the recited steps, only the structure implied by the steps. See MPEP 2113. It is maintained that the structure implied by the process steps is substantially identical to that disclosed by the reference.

Claims 1-2, 4-5, and 9-20 are rejected under 35 U.S.C. 102(b) as being anticipated by US# 4473217.

US 4473217 discloses all the limitations of the instant claims including; a spring wire comprising a core that includes a plurality of fiber tows 3; and an outer layer of resin that is substantially devoid of said fiber tows, wherein the spring wire has a constant thickness and cross-sectional shape, and is generally uniform and free from any surface irregularities. Note that the tape creates a “generally” uniform surface.

Regarding claim 9, see the abstract.

Regarding claims 10-11, US 4473217 discloses epoxy. Column 2, lines 56-58.

Regarding claims 12-20, note that product-by-process claims are not limited to the manipulations of the recited steps, only the structure implied by the steps. See MPEP 2113. It is maintained that the structure implied by the process steps is substantially identical to that disclosed by the reference.

Claims 1-2, 4-5, and 10-20 are rejected under 35 U.S.C. 102(b) as being anticipated by US# 4991827.

US 4991827 discloses all the limitations of the instant claims including; a spring wire comprising a core 10 that includes a plurality of fiber tows; and an outer layer of resin that is substantially devoid of said fiber tows, wherein the spring wire has a constant thickness and cross-sectional shape, and is generally uniform and free from any surface irregularities. See figure 4, and column 4, lines 15-34.

Regarding claims 10-11, US 4991827 discloses epoxy. Column 5, lines 3-4.

Regarding claims 12-20, note that product-by-process claims are not limited to the manipulations of the recited steps, only the structure implied by the steps. See

MPEP 2113. It is maintained that the structure implied by the process steps is substantially identical to that disclosed by the reference.

***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claim 7 is rejected under 35 U.S.C. 103(a) as being unpatentable over US # 6454251 in view of US# 6612556.

US 6454251 discloses all the limitations of the instant claims with exception to a rectangular cross-section. US 6454251 instead shows a circular cross-section. US# 6612556 discloses a similar composite spring and further teaches both circular and rectangular cross-sections (column 4, lines 50-55) with the rectangular cross-section increasing the stiffness of the spring. It would have been obvious to one of ordinary skill in the art at the time the invention was made to utilize a rectangular cross-section as taught by US 6612556 in the spring of US 6454251 to provide an increased stiffness for the same area, thereby reducing size and providing an increased spring force for a given application.

Claim 7 is rejected under 35 U.S.C. 103(a) as being unpatentable over US # 49918217 in view of US# 6612556.

US 49918217 discloses all the limitations of the instant claims with exception to a rectangular cross-section. US 49918217 instead shows a circular cross-section. US# 6612556 discloses a similar composite spring and further teaches both circular and rectangular cross-sections (column 4, lines 50-55) with the rectangular cross-section increasing the stiffness of the spring. It would have been obvious to one of ordinary skill in the art at the time the invention was made to utilize a rectangular cross-section as taught by US 6612556 in the spring of US 49918217 to provide an increased stiffness for the same area, thereby reducing size and providing an increased spring force for a given application.

Claim 7 is rejected under 35 U.S.C. 103(a) as being unpatentable over US # 4473217 in view of US# 6612556.

US 4473217 discloses all the limitations of the instant claims with exception to a rectangular cross-section. US 4473217 instead shows a circular cross-section. US# 6612556 discloses a similar composite spring and further teaches both circular and rectangular cross-sections (column 4, lines 50-55) with the rectangular cross-section increasing the stiffness of the spring. It would have been obvious to one of ordinary skill in the art at the time the invention was made to utilize a rectangular cross-section as taught by US 6612556 in the spring of US 4473217 to provide an increased stiffness for the same area, thereby reducing size and providing an increased spring force for a given application.

Claim 7 is rejected under 35 U.S.C. 103(a) as being unpatentable over US # 2852424 in view of US# 6612556.

US 2852424 discloses all the limitations of the instant claims with exception to a rectangular cross-section. US 2852424 instead shows a circular cross-section. US# 6612556 discloses a similar composite spring and further teaches both circular and rectangular cross-sections (column 4, lines 50-55) with the rectangular cross-section increasing the stiffness of the spring. It would have been obvious to one of ordinary skill in the art at the time the invention was made to utilize a rectangular cross-section as taught by US 6612556 in the spring of US 2852424 to provide an increased stiffness for the same area, thereby reducing size and providing an increased spring force for a given application.

### ***Response to Arguments***

Applicant's arguments filed 11/23/2005 have been fully considered but they are not persuasive. It is maintained that the references either explicitly show a "constant thickness and cross-sectional shape" as broadly defined by the claims, or the feature is inherent to the cladding or coating processes. Also note the 112 1<sup>st</sup> rejection above.

### ***Conclusion***

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Bradley T. King whose telephone number is (571) 272-7117. The examiner can normally be reached on 11:00-7:30 M-F.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, James McClellan can be reached on (571) 272-6786. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
